

Doraemon & The Genius AI-Box

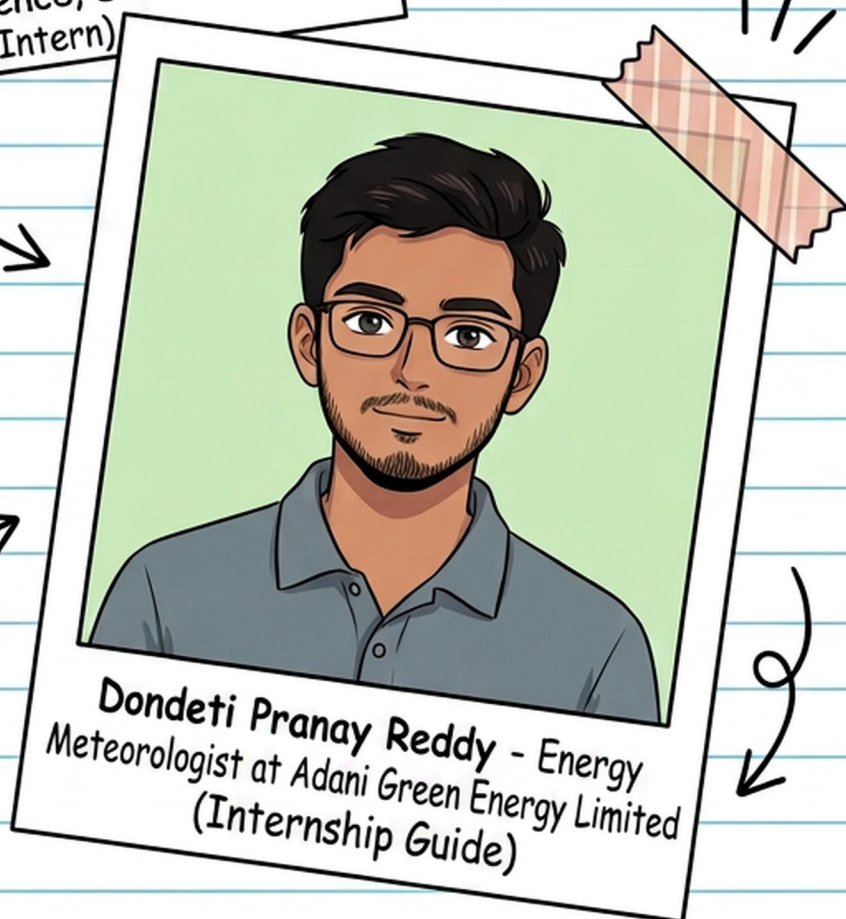

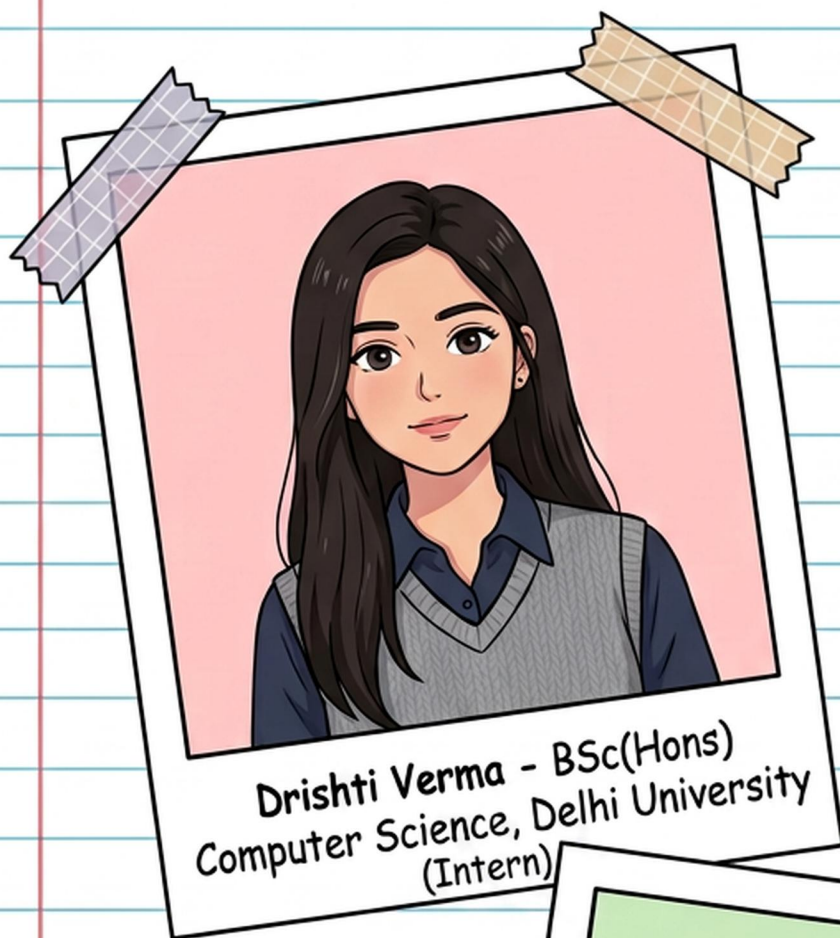

MASTERING THE 4Ds OF AI LITERACY!

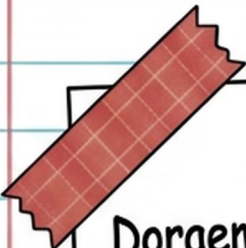

THE 4Ds: DELEGATION • DESCRIPTION • DISCERNMENT • DILIGENCE

Meet the authors

ACKNOWLEDGEMENTS

THE CHARACTERS

Doraemon, Nobita, Shizuka, Gian, Suneo and Sensei were created by Fujiko F. Fujio. All rights in the characters belong to Fujiko Pro, Shogakukan, TV Asahi, Shin-Ei Animation and ADK. This is a free, non-commercial, educational comic made in admiration of their work. It is not official and is not endorsed by them.

THE 4Ds OF AI LITERACY

The 4Ds come from the AI Fluency Framework, created by Professor Rick Dakan of Ringling College of Art and Design and Professor Joseph Feller of University College Cork, in partnership with Anthropic. They teach it in their free online course, "AI Fluency: Framework and Foundations", whose materials are shared openly for non-commercial use.

OUR THANKS

We sincerely thank Adani Green Energy Limited for supporting this project with resources and encouragement.

WELCOME TO DORAEMON!

A Quick Guide to the Classic Anime Universe

Doraemon is a famous robotic cat sent from the 22nd century to help a young boy named Nobita Nobi navigate childhood, schoolwork, and daily life using futuristic gadgets from his pocket!

-  **Doraemon:** The friendly 22nd-century robotic cat with gadgets.
-  **Nobita Nobi:** A kind-hearted 5th-grader who relies on Doraemon.
-  **Shizuka Minamoto:** Nobita's sweet, smart, and gentle classmate.
-  **Gian & Suneo:** Nobita's energetic neighborhood friends.
-  **Mr. Sensei:** Nobita's strict but caring schoolteacher.

Join Doraemon, Nobita, and friends on a special adventure learning about Artificial Intelligence!

Turn the page to begin!

Prologue: The Emergency!

DORAEMON!!

I'M DOOMED! Mom wants me to clean the yard, Gian wants me to invent a winning baseball strategy, I have to write a birthday poem to Shizuka, AND I have a school history essay due! Save me, Doraemon!

Nobita, you just need better time management. But fine...

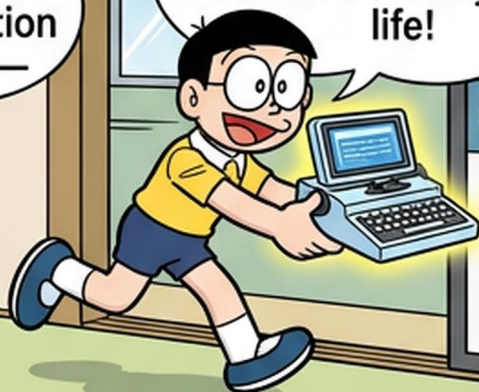

Da-da-da-daa!
The Genius
AI-Box!

Wait, Nobita! It's an AI assistant, not magic. To use it safely, you absolutely must learn the 4Ds of AI Literacy. First, Delegation means—

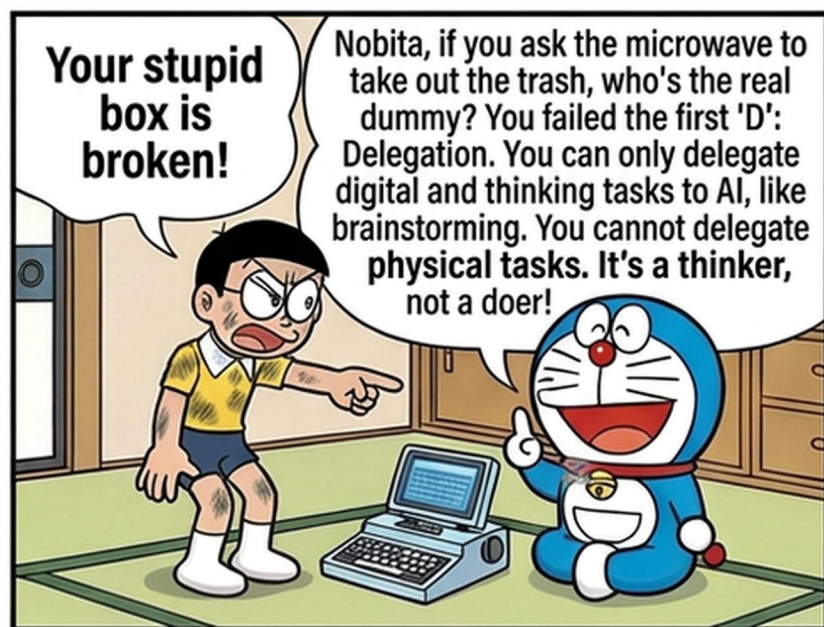

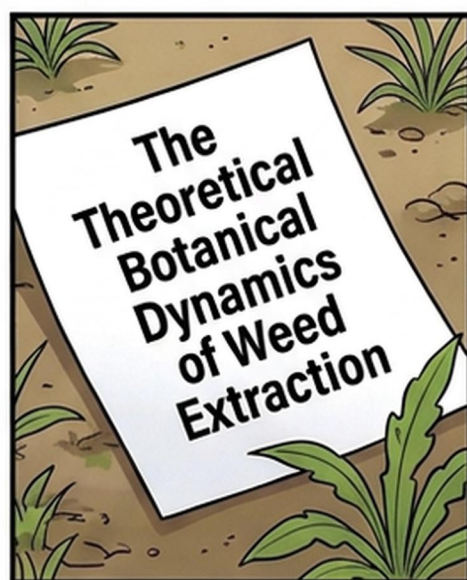

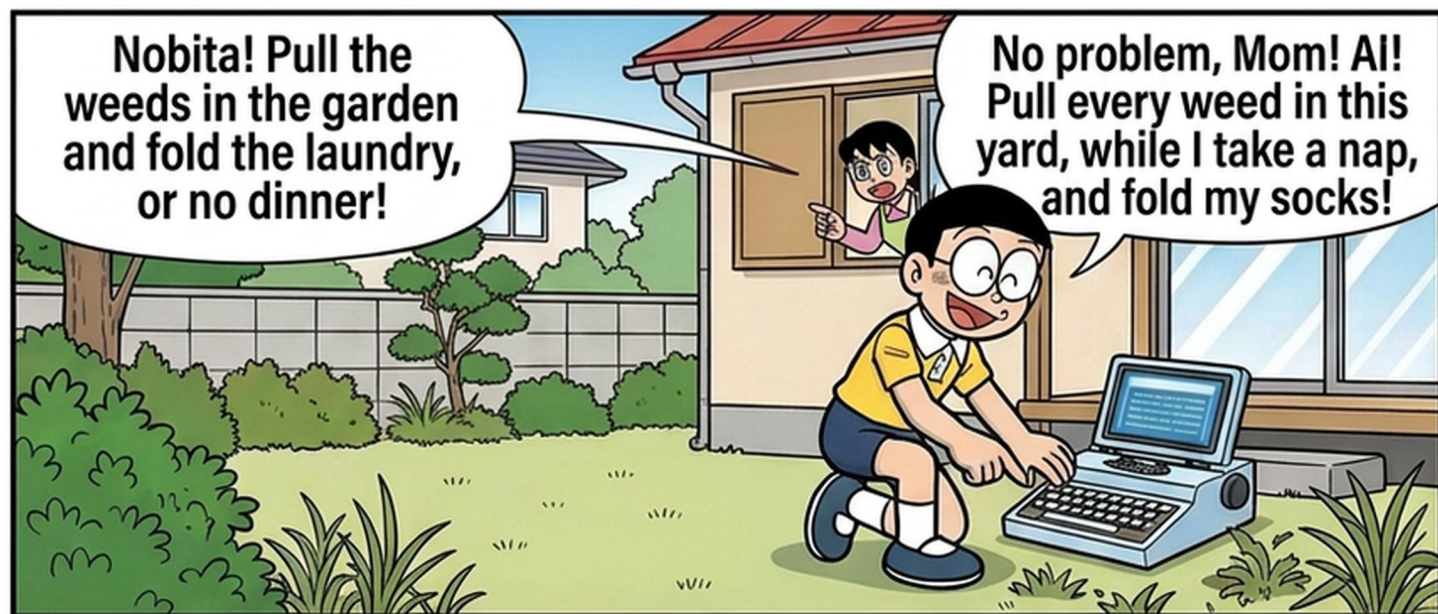

Yeah, yeah, 4Ds, donuts, whatever! I'm off to let the machine run my life!

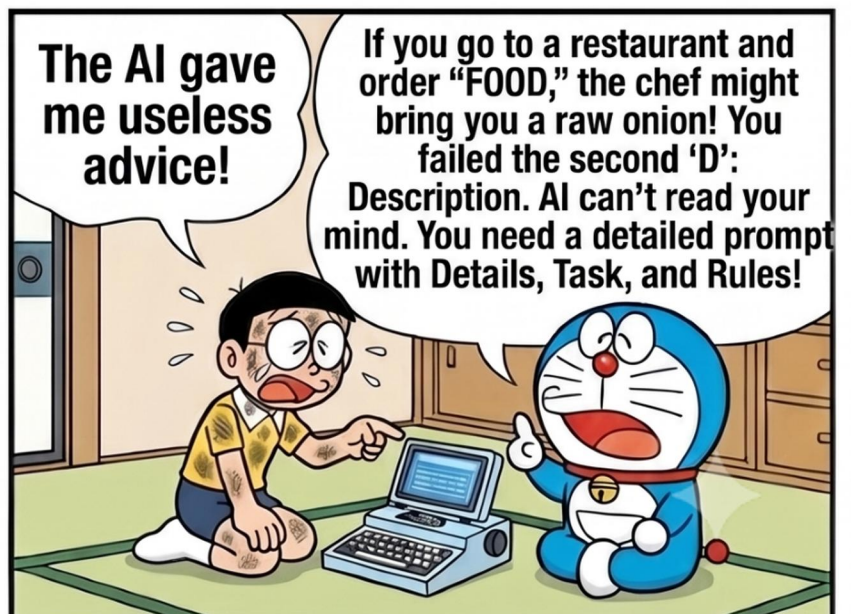

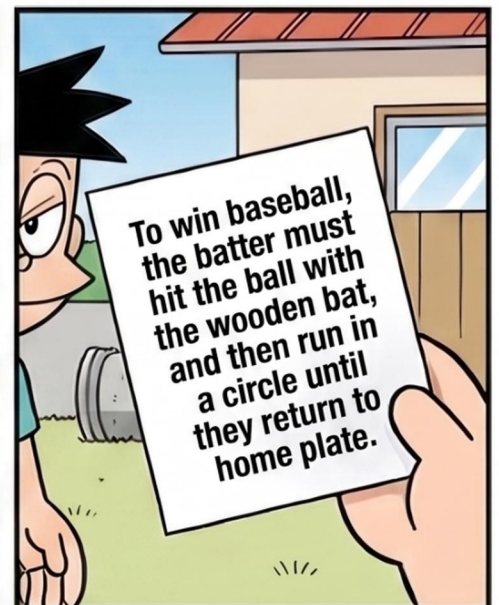

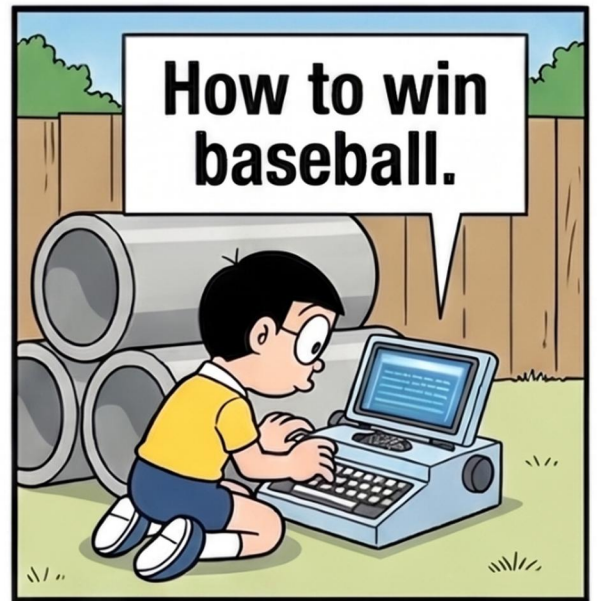

This is going to be a long week.

1. The First 'D': Delegation

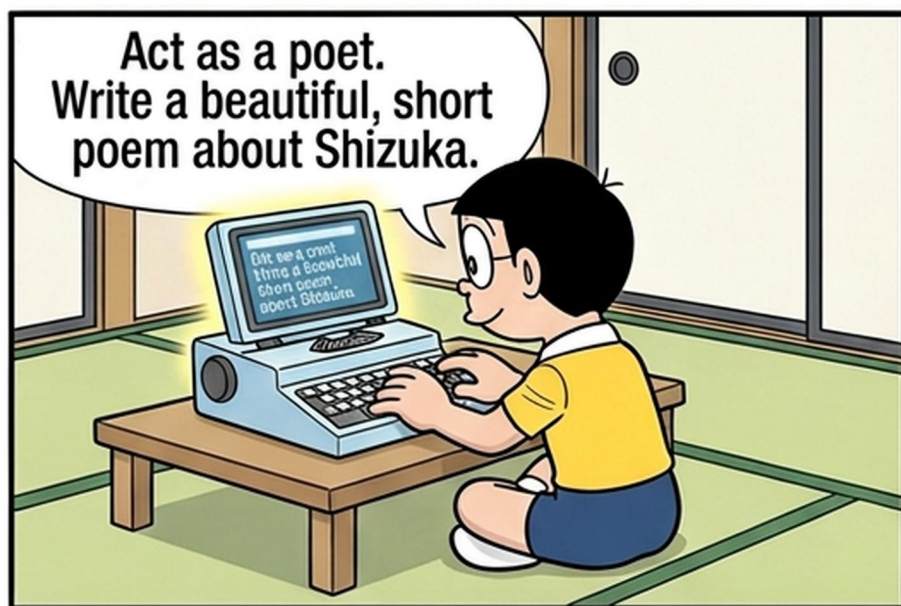

2. The Second 'D': Description

3. The Third 'D': Discernment

Act as a poet.
Write a beautiful, short
poem about Shizuka.

No time to check,
I gotta impress Shizuka
right now!

Shizuka! I wrote
this beautiful poem
just for you!

Clarification required.
Please confirm if the subject
'Shizuka' refers to the
human female who spends
an illogical amount of time in
the bathtub, wasting municipal
water resources, and whose
violin playing closely resembles
the auditory frequency
of a dying cat...

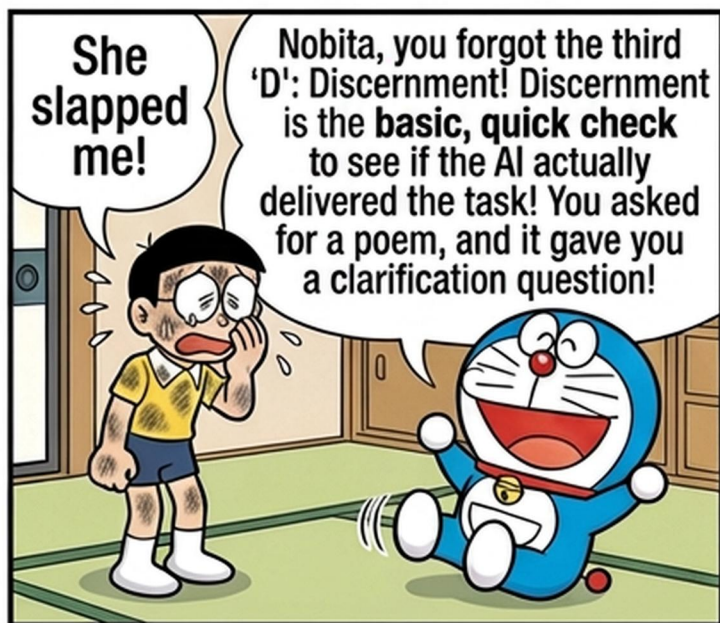

SMACK!

Wasting water?!
A DYING CAT?!

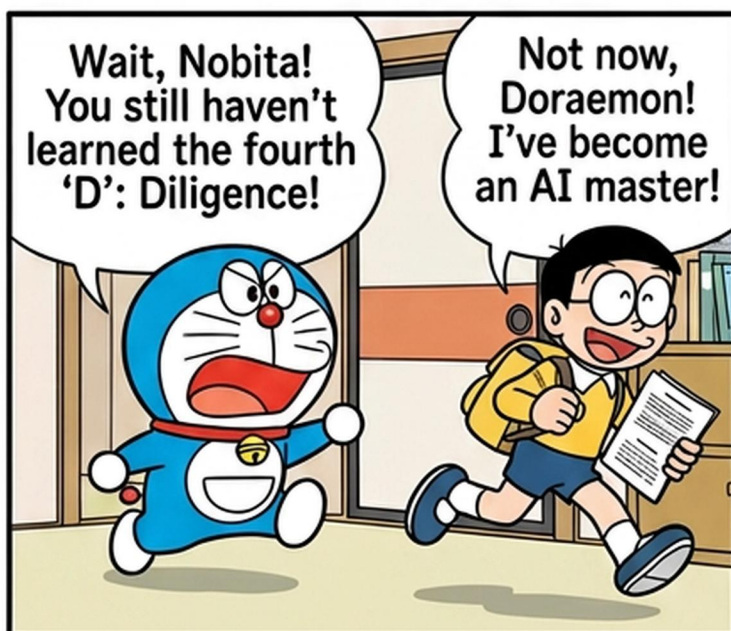

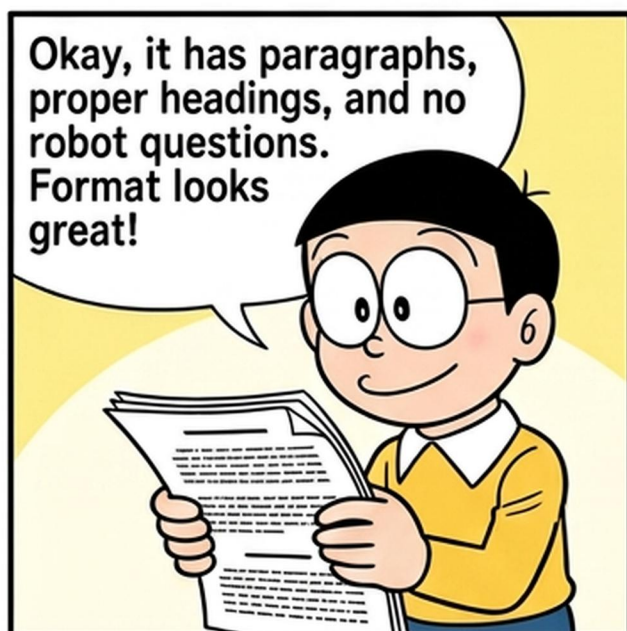

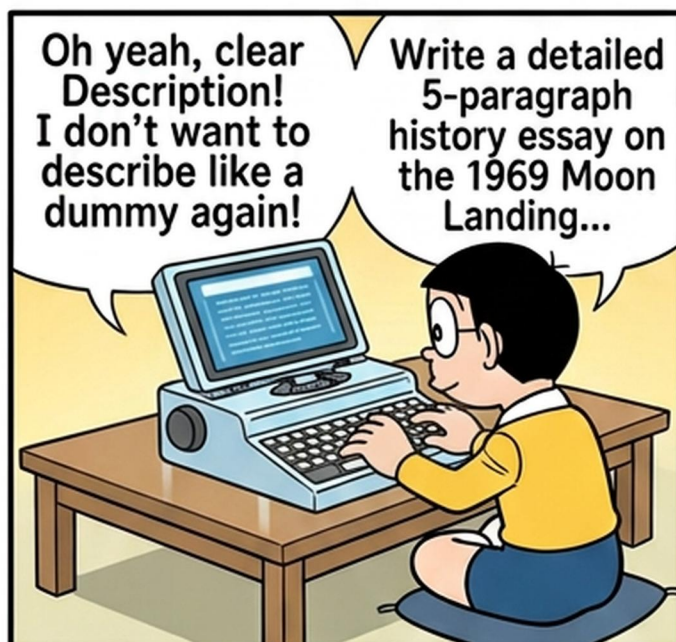

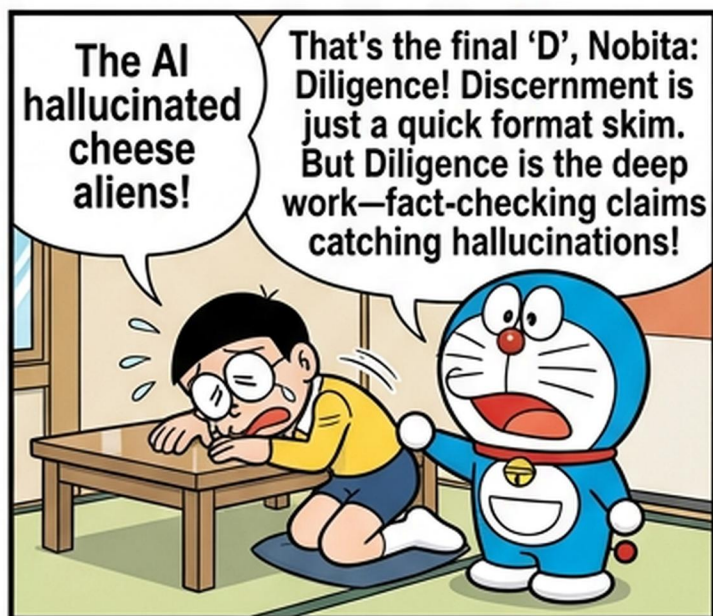

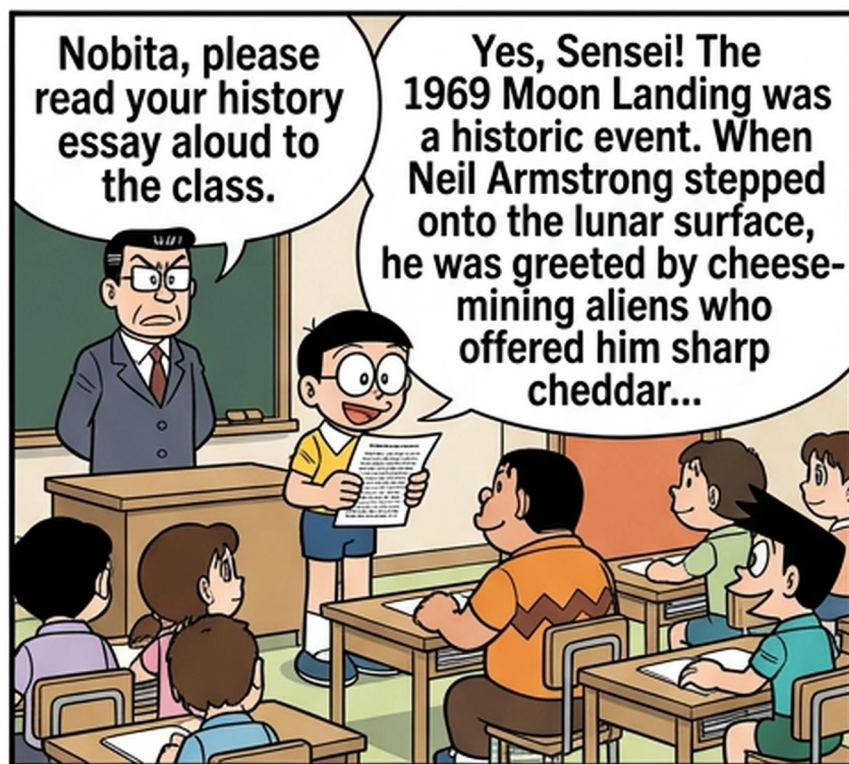

She
slapped
me!

Nobita, you forgot the third
'D': Discernment! Discernment
is the **basic, quick check**
to see if the AI actually
delivered the task! You asked
for a poem, and it gave you
a clarification question!

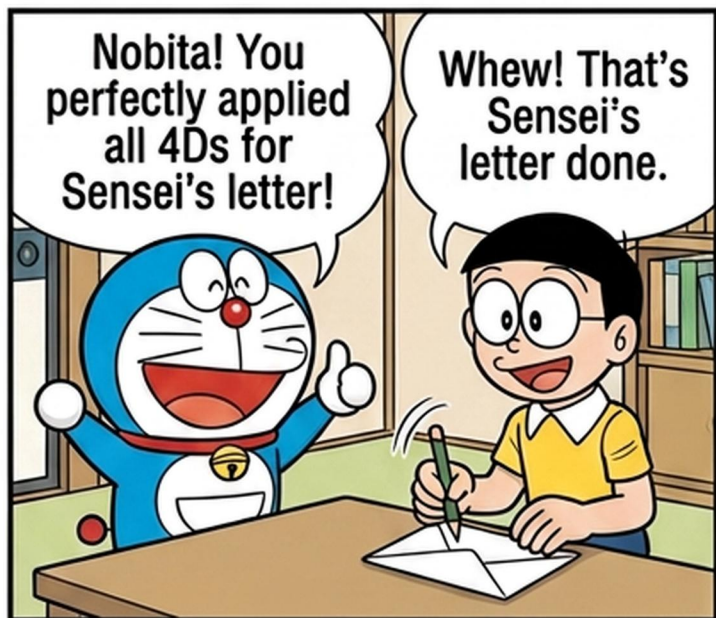

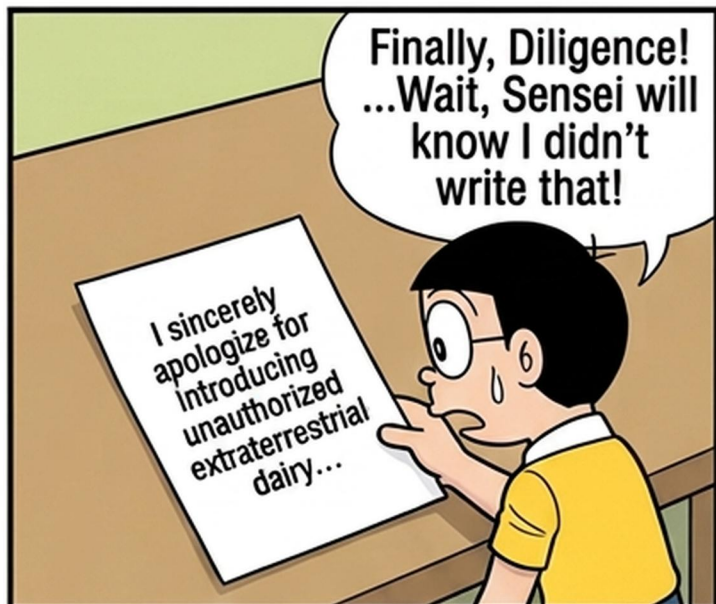

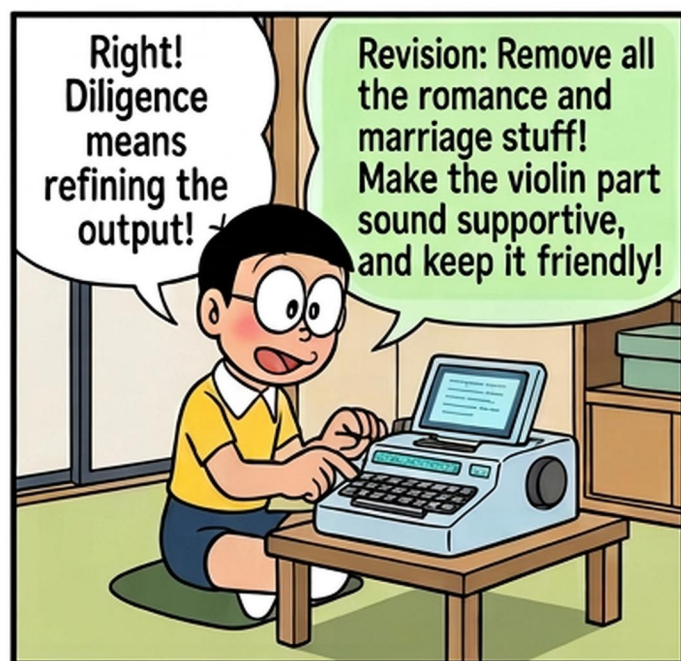

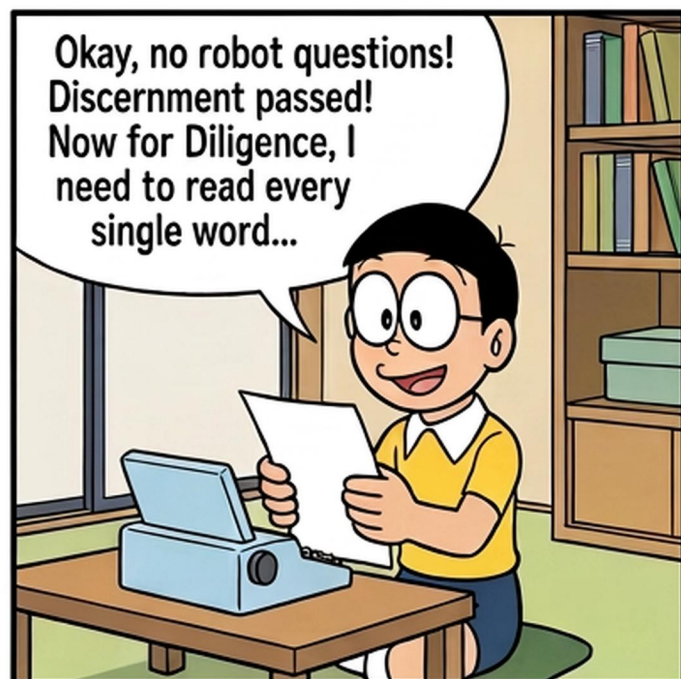

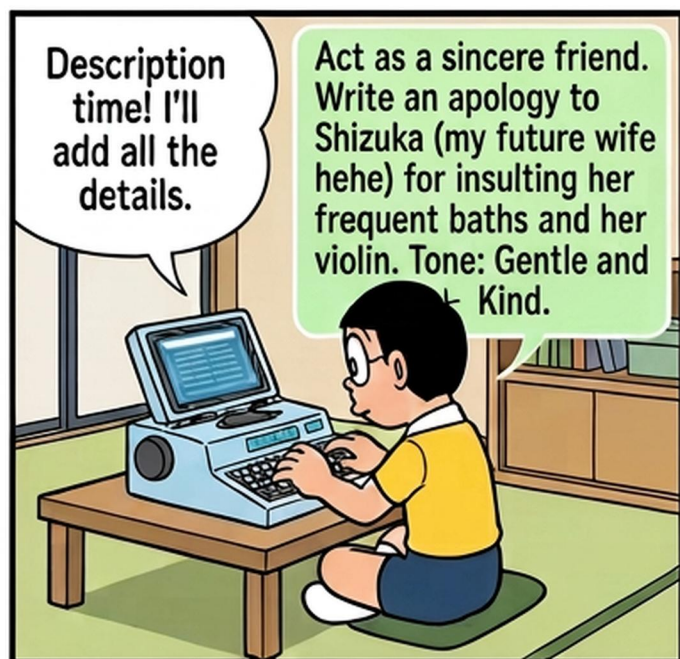

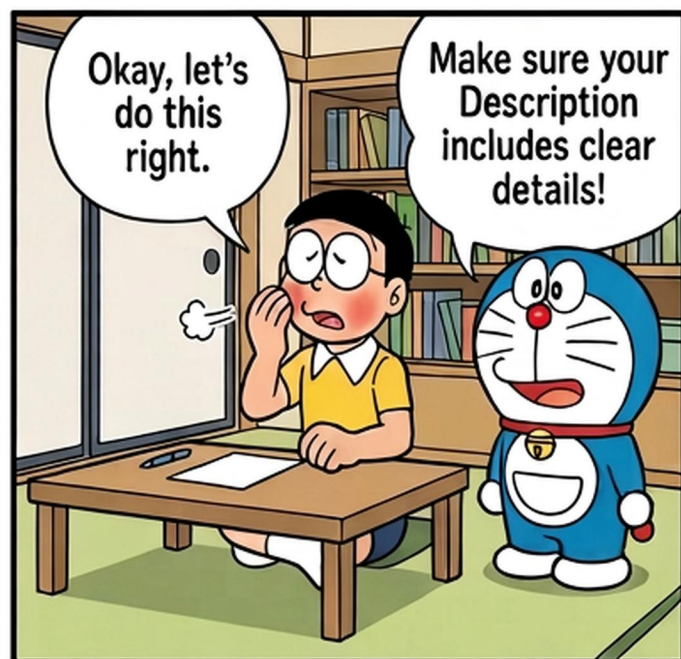

4. The Fourth 'D': Diligence

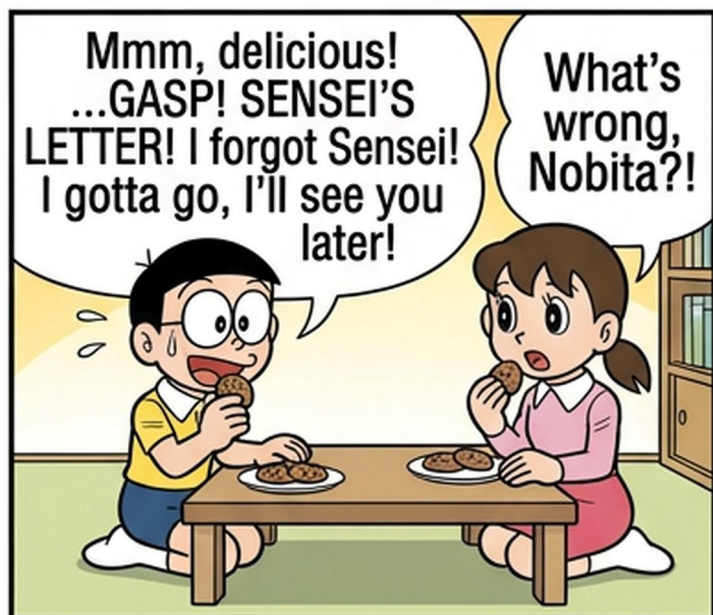

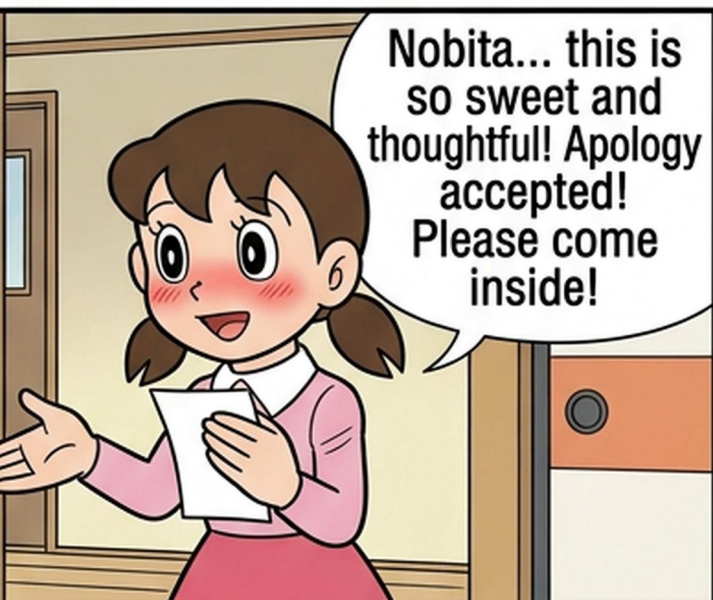

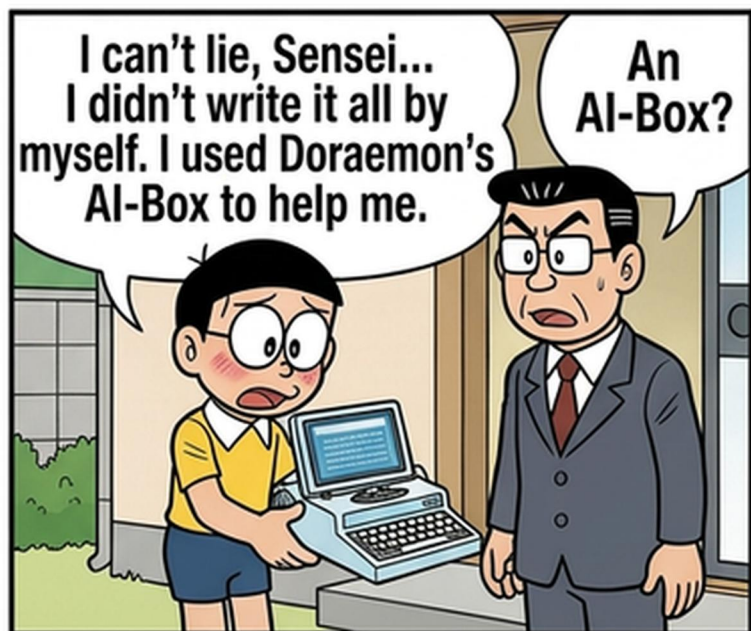

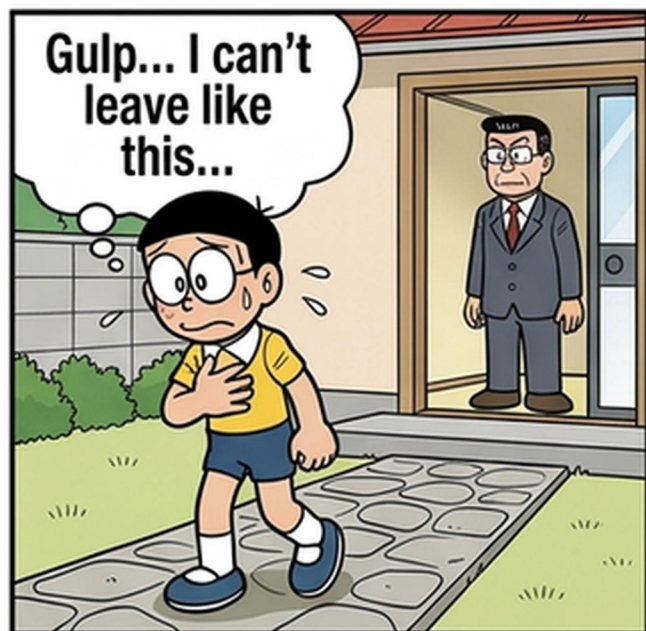

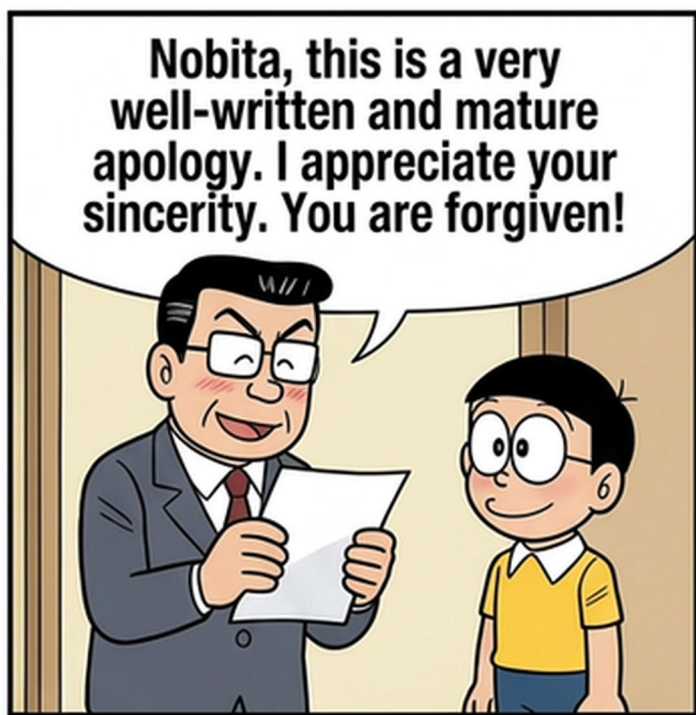

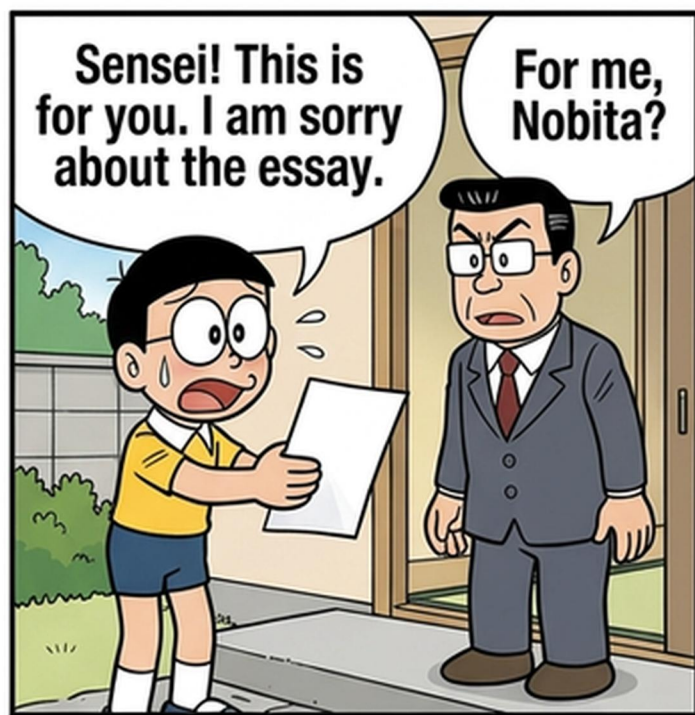

5. Friday: Mastering the 4Ds

6. Mission: Apology!

It's a super smart computer tool! I gave it instructions, it gave me a draft, and then I checked the facts and gave it feedback to fix the words so it sounded like my true feelings!

Ah, I see! So it didn't just do the work for you. You guided it, checked its work, sure the final message was sincere.

Thank you for your honesty, Nobita! Using a tool to express your ideas isn't cheating—that is working smart! I hope you use that same 'smart work' to study for tomorrow's history test!

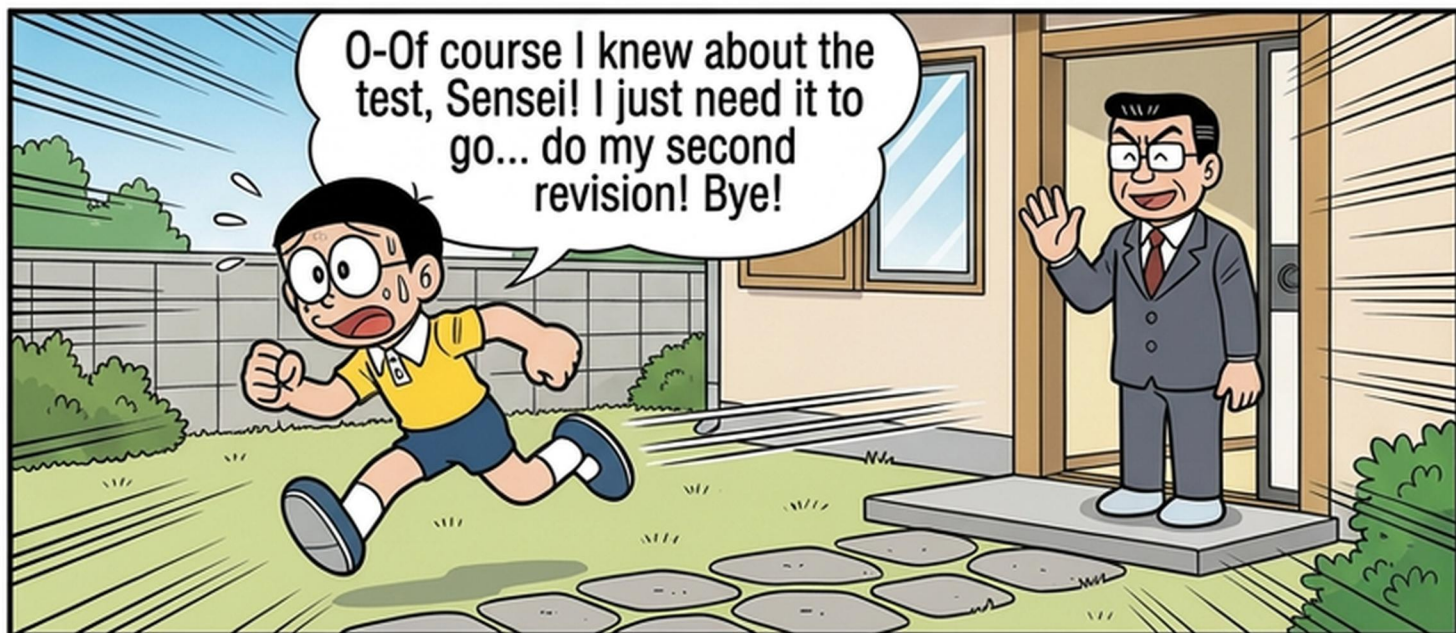

T-T-TEST?!

Yes, Nobita. The test I announced this morning. Weren't you attentive in class?

O-Of course I knew about the test, Sensei! I just need it to go... do my second revision! Bye!

7. Panic! The Test and Limits of AI

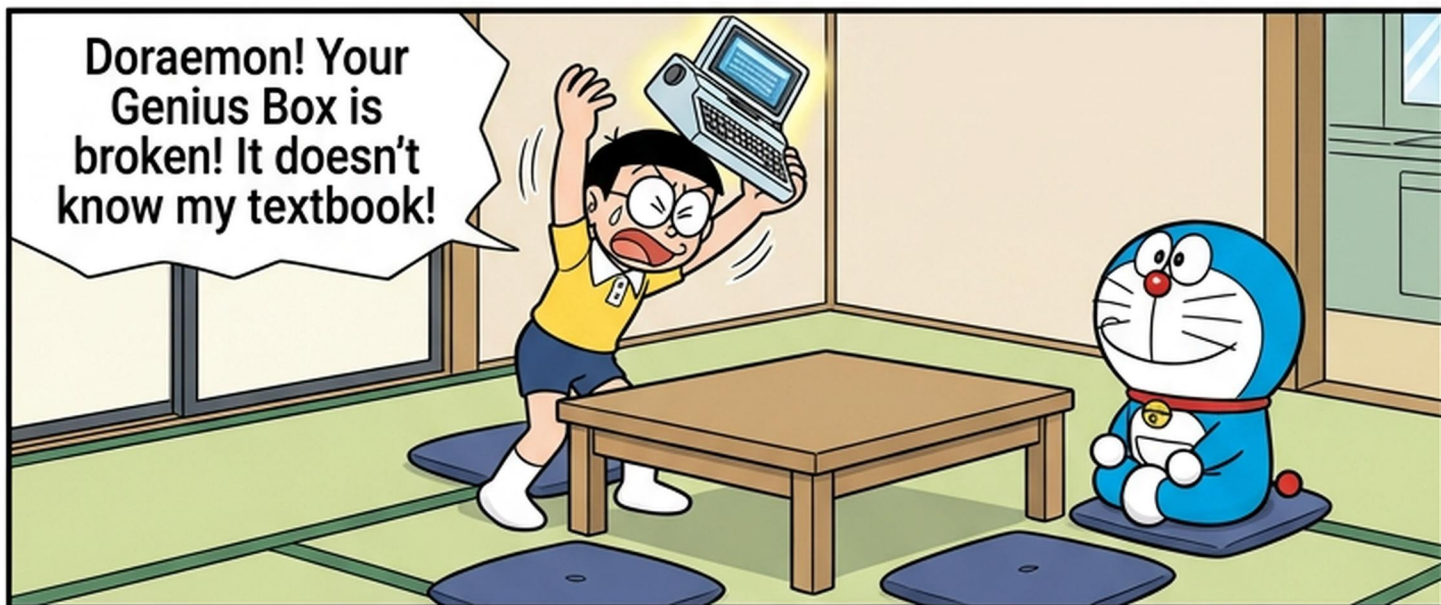

Emergency! Task: Summarize chapter 4 of Sensei's 5th-grade local history textbook right now!

I do not have access to that specific local history book!

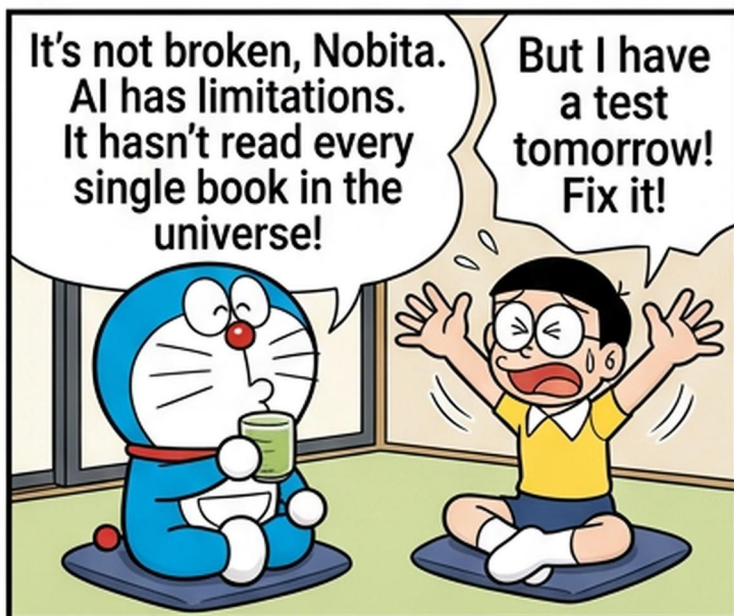

Doraemon! Your Genius Box is broken! It doesn't know my textbook!

It's not broken, Nobita. AI has limitations. It hasn't read every single book in the universe!

But I have a test tomorrow! Fix it!

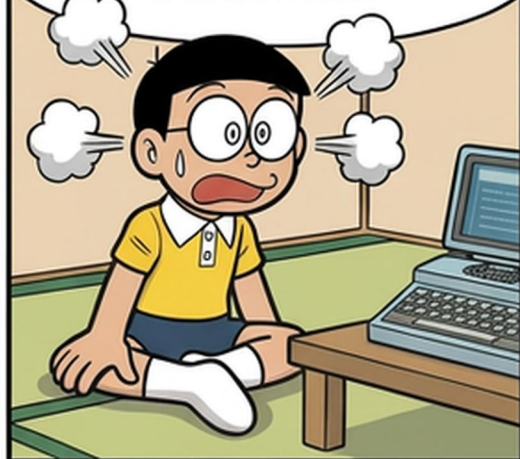

If you want the AI to know your specific textbook, upload the PDF! It uses a technique called RAG—Retrieval-Augmented Generation—to read your file and give facts!

Alternatively, you could give the AI Agent capabilities! That means giving it a search tool so it can browse the internet and find info on its own!

What the heck are you talking about?! Agents? Grounded? Speak English, Doraemon!

Don't worry, Nobita! I will teach you all about those another day! But as for tonight...

...open the book and start reading the old-fashioned way!

Waaahhh! Why can't the AI just read it for me?!

Lazy Nobita...

THE END.

Cheat Sheet (Part 1)

1. Delegation (The 'What')

Definition: Delegation means assigning a specific thinking task to the AI while you **remain the manager**. AI works best when the task you delegate is **narrow** and your interaction is **iterative** (guided by human feedback). It is always better to break a large problem down and get help one step at a time instead of altogether at once.

Example: Instead of commanding, 'Write my entire history essay,' break it down iteratively: **First** ask, 'Help me brainstorm 3 ideas for my essay.' Pick your favorite, and then ask, 'Now, help me create an outline for this idea.'

2. Description (The 'How')

Definition: AI needs detailed context to give you good answers. The easiest way to provide a massive amount of context very simply is to assign the AI a **'Role'** or **'Persona,'** followed by your exact task and rules.

Example: Instead of a lazy prompt like 'Write an apology,' give it context: 'Act as a **sincere 5th-grade student** (Role). Write a **3-sentence apology** to my teacher (Task). Do not use fancy adult words (Rules).'

Cheat Sheet (Part 2)

3. Discernment (The 'Basic Check')

Definition: This is the quick, immediate 'glance' you do the second the AI replies. You must verify that it actually delivered the right format, instead of giving you a system error, a question, or something totally off-topic.

Example: When Nobita asked the AI for a poem, he failed to do a basic check. He accidentally handed Shizuka a piece of paper where the AI was just asking him for more instructions!

4. Diligence (The 'Deep Check')

Definition: This is the thorough, hard work of fact-checking the AI's output for completely fake information (made-up facts), and editing the robotic text so it sounds like your real, natural human voice.

Example: Nobita failed to use Diligence on his history essay and got caught! But he finally used it on his apology letter by crossing out robotic words and rewriting them in his own messy handwriting so Mr. Sensei knew it was sincere.

Note: AI Agents & Tools

Definition: When you give an AI special tools (like a Web Search browser or a PDF file reader), it becomes an **AI Agent**. It can hunt down information, but you still must use Diligence to verify it!
